CIIRS // FORENSIC INCIDENT INVESTIGATION REPORT

Zinnovatio 4.0 – Gen Z Innovations Hackathon 2026 | Team: PANDA | Category: Smart & Sustainable Cities

Case Number:	CASE-2026-9021	**Status:**	OPEN
Assigned Investigator:	Detective Maya Lin	**Priority:**	HIGH
Incident Ref:	INC-2026-002	**Generated Timestamp:**	2026-10-30 15:52:40 UTC

1. INCIDENT OVERVIEW & EXECUTIVE SUMMARY

Analysis of spatial congestion and kinetic early warning indicators leading up to transit flow restriction at Gate 4B.

2. TRIPARTITE EVIDENCE INTEGRITY ATTRIBUTION

A. AI-GENERATED PREDICTION (PROBABILISTIC)	*Temporal AI flagged focal density accretion 3 minutes prior to threshold saturation (early warning indicator). Directional divergence was minimal.*
B. OPERATOR-VERIFIED OBSERVATIONS (CONFIRMED)	*Operator confirmed platform overcrowding due to simultaneous arrival of two rapid transit rakes. No physical altercations observed.*
C. INVESTIGATOR CONCLUSIONS (FINDINGS)	*Pre-incident warning signals functioned as intended. Recommend adjustment of platform barrier geometry to prevent choke point.*

3. CHAIN OF CUSTODY & EVIDENCE VAULT

Evidence Item	Type	SHA-256 Checksum	Integrity
CAM-02 Raw Sequence Telemetry (09:40 - 09:45)	VIDEO_SEQUENCE	85c905048e42cf78fde672f0ac1cef3d...	**VERIFIED**
Temporal Velocity & Attention Vector JSON	AI_TELEMETRY	e491be249a46d6c02648e4a8a587e3e7...	**VERIFIED**

CONFIDENTIALITY NOTICE: This forensic document contains verified public safety intelligence. Generated under CIIRS Zinnovatio 4.0 Platform specifications. Prohibits identity profiling and preserves anonymous scene-level evidence standards.
